

Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - Overview

Overview

Vehicles With: Electronic Manual Temperature Control (EMTC)

The Electronic Manual Temperature Control (EMTC) system heats or cools the vehicle's interior based on the HVAC control panel selection.

- The control panel selection determines heating or cooling, air distribution and enables blower motor operation.
- The temperature control setting determines the outlet air temperature.
- The blower motor switch varies the blower motor speed.
- During A/C operation, the system reduces the relative humidity of the air inside the vehicle.
- Vehicles equipped with the auto start-stop feature includes a cabin heater coolant pump to help coolant flow to the heater core.
