

Handles, Locks, Latches and Entry Systems - Overview

Overview

The power door lock/unlock feature locks or unlocks the doors upon a customer request from a door lock control switch, the keyless entry keypad (if equipped), the passive entry system (if equipped) or a valid programmed RKE transmitter (if present).

The tailgate comes equipped with a manual locking latch, a power locking tailgate or an electronic tailgate latch release.

If equipped, the passive entry feature automatically locks or unlocks the doors, or releases the tailgate latch.

If equipped, the RKE transmitter provides a button for the remote start feature.
