

Description and Operation

General information

The steering area of the Transit Custom also conveys a car-like feel, just like the complete interior of the vehicle. In particular, the steering response and feedback give the driver a feeling of comfort which is new in the commercial vehicle sector.

In addition, for the first time, the steering wheel position is now adjustable in both height and reach.

For variants with a short wheelbase as well as those with a long wheelbase, the turning circle of the new Transit Custom has been improved compared with the previous model as follows:

- 11.14 meters with short wheelbase and 15" wheel rims
- 12.4 meters with long wheelbase and 15" wheel rims
- 11.6 meters with short wheelbase and 16" wheel rims
- 12.9 meters with long wheelbase and 16" wheel rims
