

General Procedures

General Equipment

Refrigerant Identification Equipment

Activation

1. Use the refrigerant identification equipment to check that there is contaminated refrigerant in the air conditioning system.

Use the General Equipment: [Refrigerant Identification Equipment](#)

2. Inform the customer about the additional costs involved to repair the system because of the contamination.
3. Use a suitable A/C service unit designed for the purpose of collecting and storing contaminated refrigerant and dispose of the contaminated refrigerant as hazardous waste. Follow the manufacturer's instructions when working with the A/C service unit.
