

Description and Operation

Built-in roof rack

E147116

Folding mechanism

E147117

Item	Description
1	Roof mounting
2	Bracket, cross brace
3	Locking and unlocking lever
4	Locking bolt

A further new feature for low-roof models is the built-in retractable roof rack with a payload of up to 130 kg.

This roof rack can be lowered into the roof outline when not in use. On the one hand, this contributes to a reduction in fuel consumption, on the other hand it also reduces the vehicle height to below two meters.
