NEW SERVICING PROGRAMME WITH EFFECT FROM 1 JANUARY 2001

From this date, the majority of vehicles in the range will have a service interval of 18 000 miles (30 000 kilometres) (petrol and diesel engines).

This note only describes the procedures linked to this new interval; for other vehicles, refer to Technical Note 3399E.

The new servicing programme will involve the use of high technology oil complying with ACEA standards, A1, A3 or A5 for petrol engines and B3 or B4 for diesel engines.

This servicing schedule (engine oil change) requires the engine oil level to be topped up carefully during services and safety checks.

The Servicing booklet is now separate from the Warranty booklet and will be placed in vehicles on the production line.

"The repair methods given by the manufacturer in this document are based on the technical specifications current when it was prepared.

The methods may be modified as a result of changes introduced by the manufacturer in the production of the various component units and accessories from which his vehicles are constructed."
